

Electronic Flow Meter for Oil

Oil Eye $^{^{\scriptsize{\scriptsize{\scriptsize{\scriptsize{\scriptsize{R}}}}}}}$

SPECIFICATIONS

SSV11151 23.11

1. Outline

Electronic flow meter for oil is a flow meter for oil & non-corrosive liquid realized by loading an electronic indicating & counting unit on the measuring unit of a rotary piston type positive displacement flow meter.

This electronic flow meter for oil is equipped with a "user setting function" which enables the user to make setting easily in the field, and can be used for a wide variety of applications.

This flow meter is available for measurement and control of feed oil to boilers, fuel oil, non-corrosive medium and high viscosity liquid, etc.

2. Features

- Simple construction with only measuring unit as mechanical structure
- Setting mode in the field is possible by button operation on the counting unit.
- Easy maintenance in the field by simulation output
- No need of any external power supply in the case of the field indication only.
- Available placing the batch system only with valve (Batch type only)

3. Specifications

Measuring unit

Nominal siz	ze & volume symbol	15L	20S	20M	20L	25L	40L				
Measured I	iquid	Kerosene, light oil,	Kerosene, light oil, heavy oil A/B/C, non-corrosive mid or high viscos liquid.								
Nominal siz	ze	15A		20A		25A	40A				
Liquid viscosity 2~1,000mPa·s											
Liquid temp	perature	0~80°C (Up to 120	0∼80°C (Up to 120°C for high temperature specification)								
Liquid press	sure	1.0MPa or less									
Measuring	accuracy	Within ±0.5%									
Standard co	onnection	JIS10K FFFlange									
Material	Material symbol FB	Body: FC200, Body cover: AC2A, (Material is A5052 in case of selecting 15L of nominal size & volume symbol), Rotor: AC3A, Eccentric bearing:C3604BD									
	FC200 : Cast iron, AC2A	. AC3A : Aluminum	AC3A : Aluminum casting alloy, A5052 : Aluminum casting, C3604BD : Free-cutting brass								

Counting unit

8. Operation

8.1 Common operation

Flow rate

Measure the time required for one turn of the rotor of the flow meter, calculates the flow rate and indicate the momentary flow rate.

●Total value

Integrally indicates the pulse signals from measuring unit in specified unit.

Alarm

HIGH Indicated when flow exceed upper limit. %2 LOW Indicated when flow is less than lower limit. %2

BATT Indicated when battery capacity is low. Battery should be changed to new battery.

Activate only in case of flow meter with battery.

※2 : Limit of alarm is canged by data setting.

8.2. Field indication type

Operation

It indicates flow rate, total value and alarm operating by battery. It does not output pulse, alarm or analog signal.

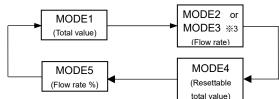

8.3. Pulse & alarm output type

- Battery, external power supply
 - Flow meter without battery type does not indicate flow rate, total value, or alarm without external power supply.
 - Flow meter with battery type indicate flow rate, total value, and alarm without external power supply.
 However, It cannot output pulse or alarm signal without external power supply.

Battery power is not consumed while supply external power. It makes the battery life lengthen.

Button operation

• The mode change as shown in figure below with pressing of the [MODE] button.

**3: Depending on the setting, "MODE2 (/h)" or "MODE3 (/min)" is indicated.

Reset operation

While indicating "MODE4" (Resettable total value), pressing [RESET] button makes total value reset to zero.

●Pulse output ※4

Unitless pulse output : Output pulse signal from measuring unit without any calculation.

Unit pulse output: Output specified unit of pulse signal.

●Alarm output ※4

Signal is output when reaching respective alarm point.

Simulation output

Unit pulse or alarm output (except for battery alarm) is experimentally output.

×4: Output signal can be changed by data setting.

8.4 Analog output type

- Battery, external power supply
 - Flow meter without battery type does not indicate flow rate, total value, or alarm without external power supply.
 - Flow meter with battery type indicate flow rate, total value, and alarm without external power supply.

However, It cannot output analog signal without external power supply.

Battery power is not consumed while supply external power. It makes the battery life lengthen.

Button operation

Refer to article of Pulse & alarm output type

Reset operation

Refer to article of Pulse & alarm output type

Analog signal output

Output flow rate as 4-20mA DC

Simulation output

Analog signal is experimentally output.

8.5 Batch type

External power supply

Both signal output and batch operation are unavailable without external power supply.

Batch method

Subtract method

Operation switch

[START], [STOP], [RESET]

Setting of batch counter

Digits shift [RESET], Number change [+], Entry [MODE]

Pulse output

Refer to article of Pulse & alarm output type

Alarm output

Refer to article of Pulse & alarm output type

Simulation output

Refer to article of Pulse & alarm output type

Counting method

No-count of excessive volume method

Counter starts counting by pressing [START] button and subtract batch counter. Measuring is stopped when batch counter become zero. Also [STOP] or [RESET] operation can stop measuring.

Count of excessive volume method

Counter starts counting by pressing [START] button and subtract batch counter, and [RESET] function can stop measuring. However, in case of flowing the liquid after even if batch counter become zero, or after even if operation of [STOP], it keeps measuring. In case of becoming zero, it will count up.

●Reset method

Automatic reset

Automatically reset when batch counter become zero.

Manual reset

Not reset though batch counter becomes zero. Reset by [RESET] button.

Button operation

The mode change as shown in figure below with pressing of the [MODE] button.

11. Strainer

To prevent foreign matters mixed in the liquid from penetrating into the flow meter to cause trouble, it is necessary to install a strainer immediately before the flow meter or at a point as close as possible to the inflow side. (STD 60 mesh)
